EDUCATION

TEXAS A&M UNIVERSITY – College Station, TX

May 2026

Bachelor of Science in Computer Science | Minor in Statistics

GPA: 3.7/4.0

Relevant Coursework: Distributed Systems, Database Systems, Artificial Intelligence, Design and Analysis of Algorithms, Data Structures and Algorithms, Statistical Computing, Software Engineering, Machine Learning

EXPERIENCE

Ketjen Corporation

May 2025 – August 2025

Data Engineering Intern | Databricks, PySpark, ETL, Azure, Power BI

Houston, TX

- Automated metadata extraction from Unity Catalog via SQL workflows to populate a centralized enterprise data catalog across **6 business domains**, improving data discoverability for analytics teams
- Built a modular PySpark QA Engine integrated into Databricks pipelines to validate **40-50 GB/day** batch ingests, enforcing data quality rules and reducing production incidents
- Optimized validation logic and parallelization, cutting data cleaning time **by 60%**, accelerating ingestion throughput and shortening downstream analytics latency
- Designed Delta Lake repositories to persist validation results and metadata, enabling traceability and auditability for data governance
- Orchestrated and scheduled Spark-based ETL pipelines using workflow automation tools (Airflow-like scheduling patterns) to ensure reliable daily ingestion and validation

PROJECTS

Nourish

Lead Backend Engineer | Supabase, Expo, CI/CD

- Engineered a multi-provider authentication system integrating Email and Google OAuth via Supabase Auth, enforcing row-level security (RLS) policies to guarantee strict per-user data isolation at the database layer
- Developed CI/CD pipelines using GitHub actions and cloud deployment workflows, reducing release latency by 60% and ensuring continuous updates to the cloud environment
- Synthesized a relational testing suite by seeding 10,000+ mock records to simulate production-scale workloads, enabling end-to-end validation of authentication flows and query performance

Vigilant Data

Full-Stack Developer | Next.js, PostgreSQL, FastAPI, Docker, ML, LLM

Spring 2026

- Architected end-to-end data pipelines ingesting macroeconomic time-series data into PostgreSQL, enabling downstream analytics, forecasting, and decision support via ML and LLM-based summarization
- Designed and deployed an LLM-driven insight layer using Docker and FastAPI that converts structured economic indicators into human-readable analysis without relying on cloud AI services

Questly

Spring 2025

Full-Stack Developer | Next.js, Typescript, MongoDB, React

- Built a personalized itinerary engine that curates activities based on budget, distance, availability, and mood; implemented server-side rendering to reduce TTFB and improve perceived load
- Engineered an API orchestration layer that cut external API calls **by 40%**, reducing costs and improving reliability

TECHNICAL SKILLS

Programming and Database: Python, SQL, C++, JavaScript, Typescript, Java, Haskell, PostgreSQL, MongoDB, MySQL

Frameworks and Libraries: Next.js, Expo, Supabase, Node.js, React, Svelte, PyTorch

Tools and Platforms: ETL, Databricks, Apache Spark, Azure, Git, Agile, Docker, LLMs, CI/CD, Unix, VMWare

INVOLVEMENT

TAMU Society of Hispanic Professional Engineers (SHPE)

August 2024 – Present

Mentor

- Provided guidance in career development and academic performance through weekly meetings
- Curated and led coding workshops to enhance technical skills and foster practical application, resulting in a **20% boost** in grades
